

## DEAD MAN SWITCH – StealthLock

"Your wish is my command — even when you're gone, I've got your back."

The screenshot shows the 'Dead Man Switch Setup' window with the following configuration options:

- Enable Email Notification
- Wipe VaultBox if triggered
- Unlock Stealth Lock if triggered
- Days Until Trigger:
- Enable Auto-Check Trigger
- Dead Man Switch is NOT armed
- 
- Enable Dead Man Switch
- 
- 

Final Message to Recipient(s):

SMTP Server:

Port:

Sender Email:

Password:

Vault Unlock Password:

Stealth Lock Password:

Stealth Lock PIN:

Output Filename (no extension):

Recipient Email(s):

### Step 1: Enable Email Notification

This setting controls whether your **VaultBox contents** will be automatically sent via email if the Dead Man Switch is triggered.

-  **Enable this option** if you want everything in your VaultBox to be **emailed** (decrypted and in original form) to your recipient(s) when the Dead Man Switch activates.
-  **Leave this unchecked** if you do not want anything emailed upon trigger.

Once enabled, the DMS will securely send your VaultBox contents without requiring any action — even if you're not there to initiate it. It's your final safeguard and message from the other side.

#### **Step 2: Enter Recipient Email Address**

This is the email address where your VaultBox contents will be delivered when the Dead Man Switch is triggered.

- You may use your own email or someone else's.
- Ensure the address is valid and accessible to the intended recipient.

**Security Note:** All files sent are fully decrypted and readable. Only use trusted and secure email addresses.

**Step # 2 Wipe Vaultbox if triggered = Wipe VaultBox Clean** leaving no trace Enable or disable this feature To disable leave unchecked

**Step #3 Unlock Stealth Lock if Triggered = Your Stealthlock will be unlocked for your significant other to View All without passwords** Enable or disable this feature To disable leave unchecked

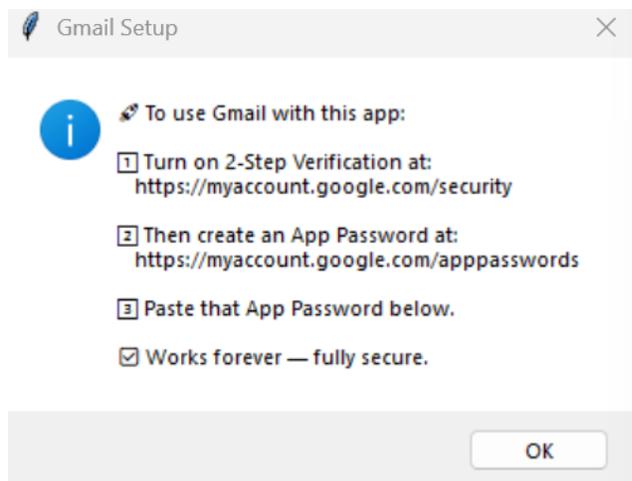

**Step # 4 Days Until Trigger = Your choice up to 365 days** Use this wisely Remember this will trigger on set date you can always change the date.

**Step #5 Enable Auto-Check Trigger = This must be enabled in order to ARM Dead Man Switch** Step

**# 7 Enable Dead Man Switch = Check this box** This starts the clock for DMS if you do not use STEALTHLOCK in your set amount of days until trigger that you have set It will trigger DMS you can always disarm and change date or recipient any time.

**Step # 8 Sender Email = Enter your Email address** Once filled SMTP Server and Port will autofill Enter your email (for this example I used my gmail and without fail Gmail works flawlessly everytime) you now get this popup

without fail Gmail works flawlessly everytime) you now get

this popup Follow steps click OK

STEP #1 Turn on 2-Step Verification at:  
<https://myaccount.google.com/security>

STEP #2 Then create an App Password at:

You must have Google account Please look it up but this is a start Create & use app passwords

Important: To create an app password, you need 2-Step Verification on your Google Account.

If you use 2-Step-Verification and get a "password incorrect" error when you sign in, you

can try to use an app password.

Create and manage your app passwords. You may need to sign in to your Google

Account.

If you've set up 2-Step Verification but can't find the option to add an app password, it

might be because:

Your Google Account has 2-Step Verification set up only for security keys.

You're logged into a work, school, or another organization account.

Your Google Account has Advanced Protection.

Tip: Usually, you'll need to enter an app password once per app or device.

ONCE CREATED : Manually add to Email Password because your

standard Email password will not work You must use this

step for it to work This will work Forever and Fully Secure

## **You can use any email That has these features For example**

To use Gmail with this app:

1 Turn on 2-Step Verification at:

<https://myaccount.google.com/security>

2 Then create an App Password at:

<https://myaccount.google.com/apppasswords> "@gmail.com"

3 Copy it password

To use Outlook:

1 Enable 2FA on your Microsoft Account.

2 Then create an App Password under Security settings. "@outlook.com" in email

or "@hotmail.com" in email:

3 Copy it password

To use Yahoo:

1 Turn on 2FA in your Yahoo Account. "@yahoo.com" in email

2 Generate an App Password.

3 Copy it password

 To use iCloud:

① Turn on 2FA for your Apple ID.

② Generate an App Password under Security. "@icloud.com" in email or "@me.com" in email

③ Copy it to password

MY suggestion and you do what you feel is best but I'm telling you Gmail never failed not even once after massive testing I trust them If I'm not explaining well enough please use online search for steps to complete this part for your 2FA from your Email provider

**ONCE CREATED** : Manually add to Email Password because your standard Email password will not work You must use this step to work This will work Forever and Fully Secure No spaces when entering your password

**Step # 9 Vault Unlock Password** : This will unlock and decrypt your vaultbox Upon DMS Trigger ( **ENTER VAULTBOX PASSWORD NOW** )

**Step # 10 Stealth Lock Password** : This will unlock your Stealth Lock Upon DMS Trigger ( **ENTER STEALTHLOCK PASSWORD NOW** )

**Step # 11 Stealth Lock PIN** : If you did not use PIN for Stealth Lock leave Empty if PIN used enter PIN now

**STEP # 12 Output filename (no extension):** = You can leave and it will be sent as Important Information or you can delete and input with whatever you would like the file to be sent as sent with your own personal touch this is your decision .

**STEP #13 Recipient Email** = Enter Recipient Email Here and if you choose more than 1 recipient add a comma and space after every Email address

**Step # 14 Final Message to Recipient(s)** = just click in the box and write your final message. There will always be something more we wish we could have said this is the time so please write your final message. When any of us walk out that door we never truly know if we are coming home. You can always create the last message in pdf and save it to the vaultbox.

### **Step #15: Run a Trigger Test (Recommended)**

Before going live, you can simulate a trigger to confirm everything is working.

Here's how:

1. Click the **“Trigger Test”** button inside StealthLock.
2. This will simulate a Dead Man Switch event.
3. StealthLock will attempt to:
  - Unlock VaultBox silently
  - Unlock StealthLock
  - Package your VaultBox contents
  - Send the release email to your configured recipient

 **This will actually send the email** — only use with test files and a test recipient.

 If successful, you'll receive messages.

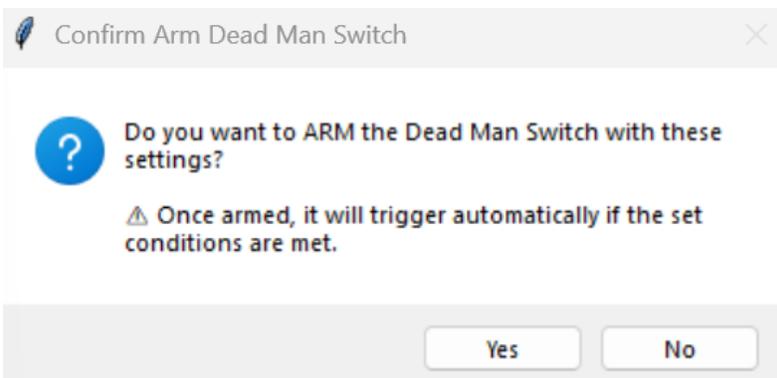

Once you've confirmed everything works, it's time to **arm the Dead Man Switch** for real.

1. Open **StealthLock**.
2. Go to the **DMS Setup** section and fill out required fields as explained already and Click "**ARM DMS**".

 The system will now monitor in the background and check automatically every 5 minutes.

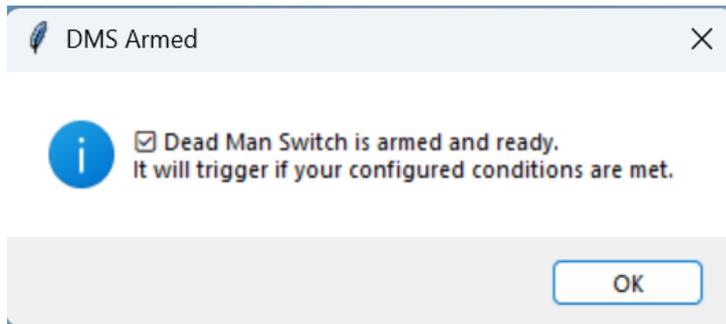

If the trigger date is reached without disarming, it will silently launch StealthLock and send your decrypted package.

**Save & Arm Dead Man Switch** : Enable Now and you will see 2 popups  
First preview and safety check DMS this will have all entered info Please  
make sure everything is correct

**IF all information is correct select yes**

**Once confirmed now you will see this**

**Now Dead Man Switch Date will turn green and verify armed and ready**

---

 **Forever Brothers. Always Unstoppable. Side by Side Edition.**

---

After completion of all steps and verification double check **Click Preview Saved Config and if all is correct you can proceed with testing.**

**Step # 1 Add any file into your Vaultbox and lock your VaultBox**

**Step # 2 Click Run Full DMS Trigger Test and check your Email that you used for testing and verify it worked**

**Now you Have a True peace of Mind knowing Dead Man Switch got your back even after your no longer here to send yourself**

**Save your financials, will, pictures and anything you feel is important to help your loved ones and let them know that even though you are not here physically with them you are still there for them, a shot from the other side.**

**Show your loved ones even after you're no longer here you are still there for them. That is a true peace of mind for all. Now you can rest in peace.**

**NOTE: Everything in your VaultBox will be decrypted and sent in original form safely and without fail no matter how large your vaultbox is and if you test with large volume please do that only once, do not test too much it will flag your email provider. There is no other product out there that can accomplish this task and your email provider will not understand how this is possible therefore flagging your account so please use sparingly or only for its original purpose.**

 **Final Notes**

**Congratulations — your Dead Man Switch is now fully operational.**

**StealthLock will now run silently in the background, watching over your system.**

**As long as you check in regularly (by opening StealthLock or disarming/rearming), your data stays safe.**

**If the timer runs out without a check-in:**

- ✓ Your VaultBox will unlock**
  - ✓ Your StealthLock will decrypt**
  - ✓ Your final message and encrypted release package will be sent automatically**
  - ✓ All activity will be logged silently**
- 

## **Important Reminders**

- Test responsibly: Use “0” days to simulate the trigger and close Stealthlock and within 5 minutes your email will be sent successfully.**
- Don’t forget your secrets: Your VaultBox password and email credentials are essential.**
- 
- Want to update your message or email?  
Simply disarm the DMS, update the fields, and re-arm.**

---

 Need to Reset Everything?

**You can disarm and that will wipe all settings and start fresh within Dead Man Switch.**

---

You Did It.

**You've taken your digital security to a whole new level. Whether protecting sensitive data, preparing for emergencies, or securing peace of mind —**

**StealthLock has your back. Always.**

**If your Dead Man Switch is triggered the next time anyone opens your PC and gets an internet connection it will send all instantly and repeatedly until all is sent and behind the scene nobody will know. No password necessary, it automatically sends everything in your vaultbox decrypted.**

**Otherwise if you are on a mission and don't know if you are ever going to make it back home you can leave your PC on and StealthLock closed to maintain security and also make sure you are logged in and have continuous internet connection it will be sent automatically if**

**triggered and your recipients will receive your message guaranteed.**
